

MIGUEL VICENTE ARARÁ LUJÁN

iOS DEVELOPER

(+34) 627 77 08 78 | miguel.arara5@gmail.com | Spain

PROFESSIONAL SUMMARY

Mobile Engineer specialized in iOS development and SwiftUI architecture, with experience building scalable features for high-traffic e-commerce apps serving millions of users. Strong background in feature flag systems, A/B experimentation, advanced analytics instrumentation, and dynamic configuration in large-scale multi-market environments.

Previously worked as a Full Stack Developer building REST APIs, microservices in Python, and automation systems — providing a solid backend understanding that strengthens cross-team collaboration and end-to-end problem solving. Currently focused on developing and migrating complex applications to SwiftUI for one of the world's leading fashion retail platforms

WORK EXPERIENCE - 8 YEARS

iOS Developer - Nomasystems S.L. | 2022- Present

Software Engineer Enterprise

- Development of a high-traffic e-commerce iOS app serving millions of users across 30+ markets.
- Architected a core commerce module with dual-backend routing, actor-based mutation queue with debounce/batch coalescing, and optimistic UI with automatic state reversion on failure.
- Designed feature flag infrastructure for gradual rollouts and A/B experimentation, enabling runtime service routing without app restarts.
- Led migration from legacy completion-handler APIs to Swift Concurrency (async/await), building adapter layers to bridge Objective-C controllers to modern Swift patterns.
- Diagnosed and resolved a complex OAuth authentication issue involving ephemeral browser session cookie isolation, producing diagnostic tooling and coordinating cross-team resolution with backend.
- Implemented advanced analytics instrumentation with impression tracking, scroll-based visibility detection, and structured event taxonomy across multiple product surfaces.
- Leveraged AI-assisted development to accelerate architectural exploration and root-cause analysis, reducing investigation cycles significantly.

Full Stack Developer - Support Factory | 2020-2021

Bussines Consulting

- Development of solutions using Python, PHP, and JavaScript.
- Creation of API REST for an internal tool to Speech generator.
- Maintenance and development of systems for internal projects and external clients.

Full Stack Developer - NTT DATA | 2018-2020

Big Data Public Sector

- Design and maintain micro services in Python. Automatization of tasks using scraping and crawling scripts, and data management with Pandas.
- Participation in large-scale corporate projects for the public sector.
- Development using JavaScript, and Docker containers. Participation in large-scale corporate projects for the public sector.

ACADEMIC RECORD

University of Alcalá De Henares | 2015-2020

Computer Engineer of Systems Information

Faculty of Electrical Engineering and Computing

University of Zagreb | 2020

Erasmus

SKILLS

- Swift (Swift UI / UIKit)
- AI
- Git/Github - Control Version
- Fastlane CI/CD Pipelines
- AWS
- TypeScript

APTITUDES

- Adaptability
- Proactivity
- Pleasant
- Willing to help
- Team working

LANGUAGES

- Spanish - Native
- English - C1
- Catalan - High comprehension, basic conversation
